Scuola Pialli 2023

School of advanced geothermal technologies Perugia October 2-5 2023

In recent years we have witnessed a growing demand from governments and the public to reduce CO2 emissions.

Geothermal technology (heating, cooling and power generation) has the potential to contribute greatly to achieving the goals agreed in Paris.

But this type of technology has not yet grown in line with other renewables.

The Pialli 2023 school aims to provide the best training by combining the teaching of experts from the geothermal industry and the academic world, taking care of both the theoretical and operational aspects. Therefore, the Pialli 2023 School is recommended for geoscientists and engineers who wish to have a career in this technology and for academics (PhD and postdoc) who intend to carry out research programs in this field collaborating with industry.
